Project Code: UNMD0007
Project Name: Maryland – State of the State
Prepared for: Candace Turitto, University of Maryland, College Park
Interviews: 500
Field Period: October 22, 2024 – October 29, 2024
Project Manager: Melissa M. Moore, melissa.moore@yougov.com

=====

YouGov interviewed 611 Maryland registered voters, with the goal of screening for and surveying likely voters in Maryland. The Maryland registered voters were then matched down to a sample of 529, yielding a target subsample of 500 MD likely voters. The respondents were matched to a sampling frame on gender, age, race, and education. The sampling frame is a politically representative "modeled frame" of Maryland registered voters, based upon the American Community Survey (ACS) public use microdata file, public voter file records, the 2020 Current Population Survey (CPS) Voting and Registration supplements, the 2020 National Election Pool (NEP) exit poll, and the 2020 CES surveys, including demographics and 2020 presidential vote.

The matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined, and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, years of education, home ownership status, and 2020 presidential vote choice. The propensity scores were grouped into deciles of the estimated propensity score in the frame, and then post-stratified according to these deciles.

The weights were then post-stratified on home ownership status and 2020 presidential vote choice, as well as a four-way stratification of gender, age (4-categories), race (4-categories), and education (4-categories). The weighted dataset of MD registered voters was then subsetted on likely voters, and the weights were trimmed and recentered around 1, to produce the final weights for MD likely voters.
